# Cornice Range

## Specifier Guide

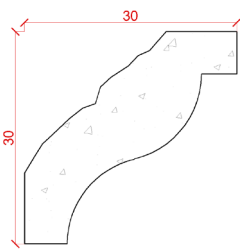

From our renowned archive of mouldings, our master team handcrafts every cornice in plain, decorative and genuine period patterns. Each length of cornice is handmade by our craftsmen and delivered from our Studio directly to your project on a supply only basis or for installation by our experienced tradesmen.

# Types of Mitre

Installation of our plaster cornices should always be carried out by a skilled tradesmen, at Locker & Riley we offer a full installation service of all of our products and our sales team are happy to assist with any enquiry.

The overall finished look of your cornice installation will be highly dependent on the internal and external mitres.

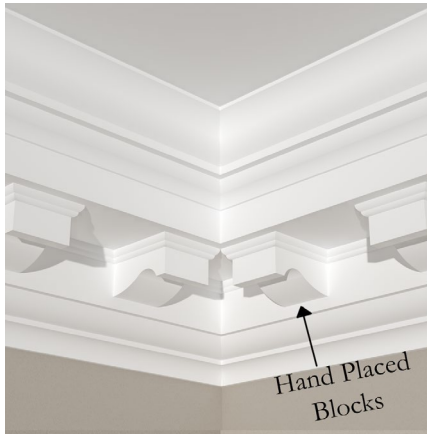

There are four main options for the installation and finish of the mitres which can be chosen and discussed with your installation team.

## Mirrored

A mirrored mitre is symmetrical and best suited to a cornice containing a uniform enrichment such as an Egg & Dart, Dentil, Lambs Tongue or Leaf. This type of mitre can be cut and made good on site from the manufactured straight lengths and requires setting out and measuring of the pattern.

## Balanced

Balance mitres refer to mitres being consistent throughout the room. To achieve balanced mitres a survey of the room is carried out and technical drawing created to plan how stretching the mould can assist to cast sections of the cornice enabling the mitres to be installed to a balanced finish.

If you wish to discuss the available mitre options for your chosen profile or to discuss your project in further detail please contact a member of the Sales Team on 01245 322022 or [enquiries@lockerandriley.com](mailto:enquiries@lockerandriley.com)

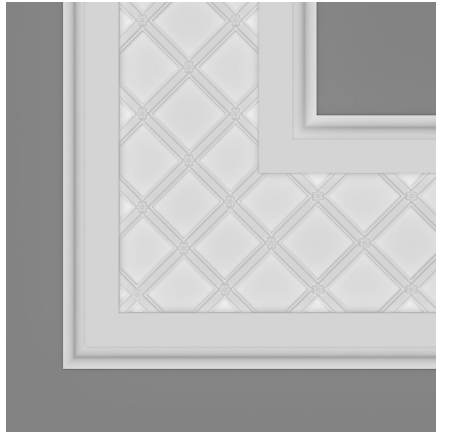

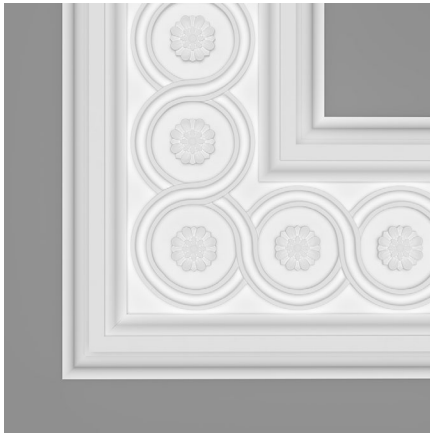

## Best fit

A “best fit” mitre is synonymous with cornices that have enrichments with a natural flowing pattern. The mitre is once again cut and made good on site with the manufactured straight lengths however setting out is planned around the room to leave the single mitre that may not be a true “best fit” in the most discrete location of the room.

## Leaf or Preformed Mitre

A mitre leaf is a separate enrichment specifically designed to dress over the cornice enrichment to cover the mitred cornice. A mitre leaf is often used on an Egg & Dart or Lambs Tongue and offers a timely & cost effective solution for mitre installation.

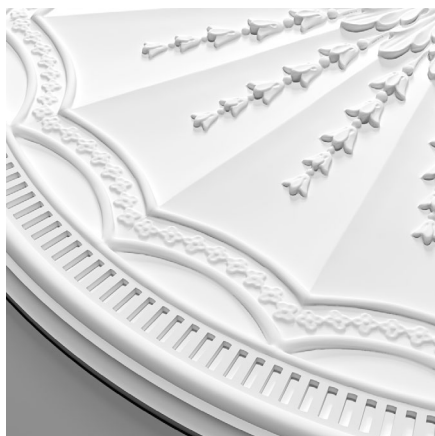

A preformed mitre is cast from a bespoke mould manufactured following a survey of the room where the cornice is to be installed. The bespoke mould is designed and modelled to perfectly balance the enrichment on every mitre.
